How to make a sponge boat

1) **Choose a coloured sponge**

Do you think the scratchy green side is the top or the bottom?

Yes, it's the bottom! Sponge absorbs water so the green side will float for longer

2) **Cut a big square of paper for your sail. You can decorate it with pencils and crayons**

3) **Take one wooden stick or a pencil (be careful of the sharp pointy end!) Now pierce a hole through your sail at the top <u>and</u> bottom and move your sail to the top of the stick.**

4) **To finish, poke the pointy end into the sponge and test you boat!**
