

Want to save the world?

We're running a hackathon to find ways to decarbonize the London Museum of Water & Steam.

Our goal is to introduce green technology at the museum so it can continue to operate steam engines but without the high carbon footprint.

Together with our partners we'll find solutions. We're aiming for short term carbon reduction plans and longer term decarbonization strategies.

And we're also giving out prizes for the best solutions, including the chance to win an internship with Worley (undergraduates only).

Time and date - 10am Friday 25th February 2022

Location - 27 Great West Road, Brentford, TW8 9BW

More information - thomas.eastgate@worley.com

Please note the event is subject to COVID restrictions
